8.PAYMENT POLICY-SECURITY

Recognizing that security is one of the most important factors in electronic payments EveryPay has taken all the necessary steps to provide the most secure services. EveryPay is a Payment Institution licensed by the Bank of Greece and all information transmitted to EveryPay is confidential. From the beginning to the end of your online session, all your information and personal information is encrypted, using the 128-bit Secure Sockets Layer (SSL) encryption protocol. Encryption is essentially a way of encoding information until it reaches its designated recipient, who can decode it using the appropriate key. Access to EveryPay systems is controlled by firewalls, which allow customers / visitors to use specific services, while blocking access to EveryPay systems and databases with confidential information. For maximum data protection, and as required by the PCI-DSS standard, EveryPay uses state-of-the-art malware

detection systems (Intrusion Detection and Denial of Service Protection Systems). EveryPay hosts all of its infrastructure in the most advanced cloud service in the world, namely AWS. Only authorized employees have access to the data servers. All necessary security patches are implemented immediately with the detection of a potential threat. All systems have followed a strict hardening procedure as per PCI-DSS standards.
